

Acknowledgements

This PhD could not have been possible without the help of many people. Special mention must go to my supervisor Dr. Myron Zalucki (the University of Queensland) who despite all the editing of numerous drafts has managed to stay enthusiastic. The Grains Research and Development Corporation (GRDC) generously funded this work. I would like to thank the Colin Birch, and others at Gatton Farms, The University of Queensland, School of Agriculture and Horticulture for providing and skilfully maintaining the field sites. The insecticide spray in Chapter six (Decis OptionsTM) was kindly supplied by Aventis Crop Science Pty Ltd. and applied by workers from Horticultural cropping unit. Thanks to Les Fletcher and Grant Andrews in the School of Life Sciences workshop for construction of traps and other equipment.

I would like to thank Gregg Daniels (UQ insect collection), Dr. Steve Ashe (CSIRO) and Dr. Mofakhar Hossain (NRE Victoria) for their assistance with the identification of specimens. Dr. Robert Raven and Wendy Hebron at the Queensland Museum identified the spider morphospecies. Brad Scholz at The Department of Primary Industries in Toowoomba was integral in developing the use of *Helicoverpa* spp. egg cards in the field. Thank you to Sue McClean and co-workers (DPI Toowoomba) for supplying *H. armigera* pupae. Glen Graham, Jo Kent, Leon Scott, Kirsten Scott and staff and students of the Centre for Identification and Diagnostics provided technical assistance and support for the molecular work (Chapter ten). Thank you to the students in the Molecular Zoology laboratory at The University of Queensland.

I would like to thank the growers and consultants who responded to my survey (appendix one). John Cameron allowed me to distribute surveys at the GRDC research update in Dalby. Thank you to Marie-Louise Johnson (UQ) and Julie Ferguson (DPI Toowoomba) for helping in the drafting of the survey. The following people helped with the distribution of the survey: Cotton Consultants Australia, Ken Bullen (Gatton DPI), Craig Nowland (Moura Rural), Phil Burrill (Warwick) and many others. Errol Hassan (UQ), Marie-Louise Johnson (UQ), Gimme Walter (UQ), Mary Whitehouse (CSIRO), Paul Cunningham (UQ), Mike Furlong (UQ) and many other researchers assisted with experimental design and reading drafts. The two anonymous examiners provide many helpful and positive comments. Fellow students assisted with both minor and major issues throughout the course of my work. Special

mention goes to Mark Wade, Andrew Ridley and Mary Finlay-Doney who have been unfortunate enough to share an office with me during this work.

Thank you to Dan Macfadyen for assisting with the figures in this thesis and many computer problems and now shares my love of spiders. Family members and friends have been a constant source of encouragement. Special thanks go to Edna Leveridge (gran) for all the sewing. Finally, I would like to dedicate this thesis to Mike Pearce (dad) and Christine Pearce (mum) so that they have something to read in their retirement.
